Attention: Daniel Cummins, Geologist

Dear Mr. Cummins:

In your letter of January 7, 1985 you requested that a sediment sample be taken from both the septic tank and drain field. We have retained Keck Consulting to perform that sampling on (date), 1985. You are invited to witness the sampling process as well as split the resultant samples. The analysis will be performed per the specifications in your letter by SEG. A formal work plan has not been established at this time, but is in process. Prior to the commencement of any action, this plan will be submitted to you for review and approval.

The cost of bringing equipment to the site for the removal of sediments from the rear of the building is a consideration in the scheduling of this work. We propose to submit a schedule for removal when the concern regarding the septic tank and drain field is resolved.

Please feel free to contact either Mike Robinson or me with any comments or questions.

Very truly yours,

Michael L. Munsell
Industrial Health/Safety Coordinator
